

Mounting option for roof system

Mounting option for roof system. Specific mountings suitable for the most common vehicles on the market.

Article number : 30331

All roof systems are supplied without mountings.

Mercure offers several mounting solutions:

- universal mountings with pads: this solution is independent of the vehicle type. It is made by drilling the roof, with rubber reinforcements. The rubber elements have two functions: they spread the load of the mounting across the surface of the roof, avoiding possible shearing of the roof and they absorb vibrations and stress produced on the roof of the vehicle by the signalling unit.
- mounting by drilling the roof.

Mountings:

			L1H1	L1H2	L2H2	L2H3	L3H2	L3H3	L4H2	CC
