

WiFi option for signalling units

Control remotely your signalling unit with Mercura's application for smartphones and tablets

Article number : 31214

Control remotely your signalling unit

Mercura's WiFi option allows to control the signalling unit from the outside of a vehicle during road intervention. It therefore contributes to improving security conditions of road users by ensuring a better signalling responsiveness. This free and user-friendly application controls all the functions of Mercura's signalling unit: messages, change of directions, signalling, extinction, etc.

Origin of product

Europe
