2. INSTALLATION

2.1. MOUNTING ON ROOF PANEL

Determine the location for the light on your vehicle (the surface should be as flat as possible).

Clean the chosen location.

- Place the fixing system on the roof.
- Mark the location of the holes for each of the 3 screws
- Mark the position for passing of the power cable

- Remove the fixing system from the roof
- Drill a hole of the correct diameter at each marked position
- Place a guide wire (not supplied) through the previously drilled power cable hole
- Place the fixing system on the roof panel once again
- Fasten the mounting system to the panel using the 3 screws provided

2.2. PROJECTOR MODIFICATION

• Remove the cigarette-lighter plug connector differentiating the power supply cable from the earth

• Remove the rubber base plate protection from the magnetic base

- Dissociate the power supply cable from the protective rubber base
- Remove the 6 screws from the magnetic base

FIXING SCREW

CUSTOMER SERVICES N° AZUR 0810 57 52 52 Fax : (33) 2 54 56 09 95 Mail : serviceclients@mercura.fr

- Remove the magnetic base
- Place the waterproof seal
- Attach the front and rear mounting bracket using the screws supplied

- Pull the cable through the guide-wire
- Place the projector on the fixing bracket in such a way that the 2 front parts of the fixing system sit on the front fixing bracket
- Fit the parts together to ensure stability.
- Verify the correct positioning of the protective seal
- Lift the rear of the projector seal to place and tighten the rear support screw mounting system

PROJECTOR ON ROOF PANEL - bottow view

- Wire the loom on the chosen power supply.
- Test the functioning of the product
